

Universal Socket Connectivity Selector Guide

Multi-Tech's universal socket flexible comm-port architecture provides analog dial-up, wireless or Ethernet socket connectivity with interchangeable communications devices. This means you can utilize one system design and populate it with the appropriate connectivity option. Now you can provide a full-line of connectivity by simply dropping in the communications device of choice. In addition, you are assured a seamless migration to future technologies.

Our universal socket developer's guide assists you in evaluating the embedded family of connectivity solutions as you consider the different options for current, as well as, future requirements of your product strategy. To obtain a guide, contact Multi-Tech directly or visit our website at www.multitech.com/products/families/socketmodem

SOCKETMODEM® & SOCKETMODEM® IP

The SocketModem embedded modem includes the controller, data pump and data access arrangement (DAA) in one communications device. With connect rates from 300 bps to 56K, it is ideal for applications that periodically need to send or receive data over a standard telephone line. The SocketModem IP embedded modem integrates a complete data/fax modem solution and TCP/IP protocol stack into one communications device.

SOCKETMODEM® EDGE, SOCKETMODEM® GPRS & SOCKETMODEM® CDMA

The SocketModem EDGE, SocketModem GPRS and SocketModem CDMA wireless modems offer standards-based EDGE Class 10, multi-band GSM/GPRS Class 10 and CDMA 2000 1xRTT performance respectively. These quick-to-market communications devices allow developers to add wireless communication to products with a minimum of development time and expense.

SOCKETWIRELESS® Wi-Fi®

The SocketWireless Wi-Fi device server connects serial devices to an IP network via 802.11b wireless networking. It is ideal for remote monitoring, control and configuration of any system.

SOCKETWIRELESS® BLUETOOTH®

The SocketWireless Bluetooth adapter utilizes Bluetooth technology to provide a secure, standards-based wireless connection between a host and a peripheral device. Providing wireless data transfer up to 100 meters, it completely eliminates the need for serial cable connections.

SOCKETETHERNET IP®

The SocketEthernet IP device server connects serial devices to an IP network. It is ideal for remote monitoring, control, maintenance, and configuration of any system.

SocketModem®

Complete, ready-to-integrate voice/data/fax modems.
